However, the 5069-OB16 is compatible with devices that operates at voltage category of 12/24VDC. Revision Part # Also Known as Availability 5069-OB16/A, Series A, Rev A Request Quote Common misspellings: "The Allen-Bradley 5069-OB16 is a Sixteen (16) channel discrete output module. Never touch the connectors or the pins on the component board, never touch the circuit components inside the equipment, and always use a static-free workstation. Please refer to the manual for more information about the 5069-OB16 such as the wiring diagrams, data sheets, firmware information and migration or obsolescence details. The vibration of this module is 5g at 10 to 500 Hz. The weight of this module is around 175g (0.39 lb). The 5069-OB16 outputs can be controlled even if the controller or module has entered Fault mode, Program mode and fault state. The 5069-OB16 individual channels has an output rating of 0.5 A resistive per channel @ 10...32V DC 8 A resistive per module @ 10...32V DC, max. The outputs are 16 channels (1 group of 16). Operational intelligence: Built-in predictive models help forecast the remaining life of drive components. What is the current output rating of each channel of the 5069-OB16? This helps you commission the drive quicker and maintain it for the life of the drive without a tuning expert. These insights help you reduce unplanned downtime and maintenance costs by replacing components as needed. Please contact us for additional information about our repair process. It is also equipped with Reverse polarity detection and Overvoltage detection with rating of 36VDC. The 5069-OB16 is a single width module. Each channel is able to withstand maximum surge current of 1 A for 10 ms per point that is repeatable for every 2s. This module has 1 green/red module status indicator and 16 yellow/red I/O status indicators. Configurable states include Hold Last State, On and Off which is the default setting. How many slot does the 5069-OB16 occupy? The maximum thermal dissipation of this module is 11.09 BTU/hr. The Allen-Bradley CompactLogix 5069-OB16 exhibits 1 Group of 16 Channels (Sourcing), 3.25 Watts Power Dissipation, 10-32 Volts DC, and an Open-Style Enclosure. Similar to other output modules, this module is mainly used to energize and actuate electrical loads. It has an output current rating of 0.5 A resistive per channel @ 10...32V DC and 8 A resistive per module @ 10...32V DC, max. It provides an output voltage range of 10-32VDC with nominal output of 24VDC. This module has a minimum On-state voltage of 10VDC and maximum of 32VDC with minimum On-state current of 1 mA per channel. Type Lead Time Price Action Repair Service 2-4 weeks Ask Get Quote Our highly skilled technicians can repair your 5069-OB16. The Allen-Bradley 5069-OB16 has a voltage category of 12-24V DC source. The 5069-OB16 has an output voltage range of 10-32VDC. This module has internal fuse protection. What is the output voltage range of the 5069-OB16? " -DO Supply Tech Discover the new PowerFlex 755TS variable frequency drive with TotalFORCE technology Flexible, high-performance control: The drive's power range, voltage classes, and performance capabilities will soon be able to meet the requirements of a wide range of motor control applications. The Allen-Bradley 5069-OB16 is a Discrete output module that belongs to the Compact 5000 I/O product family. The Allen-Bradley 5069-OB16 has an ESD immunity of 6 kV in contact discharges and 8 kV in air discharges. The module's output has a minimum pulse width of 200 μ s @ 0.5 A @ 25 °C (77 °F).The 5069-OB16 internally features Field Power Loss detection, No Load detection for each channel and individual Output short circuit, Output overload and overtemperature detection per channel. Eased commissioning and optimization: Using features such as Adaptive Control, the drive monitors machine characteristics that can change over time and automatically compensates for changes. This module is used to directly energized electrical loads that operate at 12/24VDC voltage category. This module has very similar functionality compared to the 5069-OA16 except that this module accommodates devices that operates at DC voltage. It also helps reduce mechanical wear and improve uptime. The maximum power dissipation of this module is 3.25 W (16 channels at 0.5 A). The nonoperating shock of this module is 50g (3 pulses, 11 ms), 100 μ s, \pm 10 μ s @ 25 °C (77 °F) @ 0.5 A for On to Off and Off to On transitions. Type Lead Time Price Action Repair Service 2-4 weeks Ask Get Quote Our highly skilled technicians can repair your 5069-OB16. This means you can use a common drive for multiple applications, which can simplify support. The enclosure style of this module is none (open-style enclosure). Each channel has an output delay time of ? The Allen-Bradley 5069-OB16 is sensitive to electrostatic discharge, which can cause internal damage and affect operation. All of our repairs come with a 1 Year DO Supply Warranty. This module is electronic and software-configurable.
