Appium tutorial for android pdf

Every company which is testing mobile applications manually they are planning to take a step further and moving into Mobile automation. You can start mobile automation today using Appium tutorial for beginners and can start automation today itself. If you are looking for some automation tools which you can use for mobile automation then check out the list of Automation tools for Mobile Automation Before jumping into mobile automation I would like to share some of the points 1- Appium installation is quite complex but once you are done with Setup then it is just like Selenium code only. 2- Appium supports all the methods which you have used in Selenium and the good part of Appium is that you don't have to learn something new. 3- It supports Android and IOS which is making Appium popular now. 4- Appium supports Hybrid application as well it means you can Automate Web_View and Native_View. List of topics Appium tutorial for beginners How to automate mobile web application in Appium/Selenium How to automate Native application in mobile using Appium/Selenium How to scroll in mobile devices using Appium/Selenium Appium with MAC OS Automate Mobile web Application in IOS Device using Safari Browser using Selenium (New) Appium tutorial for beginners Appium Introduction Appium Installation part 1 Appium Installation part 2 Execute Selenium test on Android Real device using Appium Automate Hybrid Mobile application in Android using Appium Automate IOS Mobile application using Appium The Applitools Eyes Appium Java SDK allows you to easily add visual checkpoints to your Java Appium tests. It takes care of getting screenshots of your application from the underlying WebDriver, sending them to the Eyes server for validation and failing the test in case differences are found. # Install the SDK # Option 1 - Maven (Recommended) com.applifools eyes-appium-java3 RELEASE 12345# Option 2 - Gradle dependencies { compile 'com.applifools:eyes-appium-java3-' } 123# Option 3 - Add the JAR files to your project # Run your first test Applifools Eyes reports differences by comparing screenshots of your application with baseline images that define the expected appearance of the application at each step of the test. By default, the Eyes SDK detects the environment in which the application is running (namely, the operating system, the type of browser and its viewport size) and compares the screenshots against baseline images that are specific to that environment. The first time you run a test in a given environment, its screenshots will be automatically saved as its baseline. Starting from the second run onward, you always have a baseline to compare against. The test below is a simple program that visually validates the Hello World web-page at . It consists of two visual checkpoints, each validating the entire application window. The first time you run this test a new baseline will be created, and subsequent test runs will be compared to this baseline. If any screenshot mismatch its baseline image in a perceptible way, eyes.close() will throw a DiffFoundException which includes a URL that points to a detailed report where you can see the detected differences and take appropriate actions such as reporting bugs, updating the baseline and more. Before running the test, make sure to set the API key that identifies your account in the environment variable APPLITTOOLS_API_KEY or directly assign it to the eyes.api_key property. You can find your API key under the user menu located at the right hand side of the test manager toolbar. If you don't yet have an account create it now to obtain your key. # IOS Simulator import org.openqa.selenium.By; import org.openqa.selenium.WebDriver; import org.openqa.selenium.remote.DesiredCapabilities; import org.openqa.selenium.remote.RemoteWebDriver; import java.net.MalformedURLException; import java.net.URL; import java.util.concurrent.TimeUnit; import com.applifools.eyes.apium.Eyes; import io.apium.java_client.ios.IOSDriver; import io.apium.java_client.remote.MobileCapabilityType; class TestApplifools { public static void main(String[] args) throws MalformedURLException { Eyes eyes = new Eyes(); eyes.setApiKey("YOUR_API_KEY"); DesiredCapabilities dc = new DesiredCapabilities(); dc.setCapability(MobileCapabilityType.APPIUM_VERSION, "1.3.4"); dc.setCapability(MobileCapabilityType.PLATFORM_VERSION, "12.1"); dc.setCapability(MobileCapabilityType.PLATFORM_NAME, "IOS"); dc.setCapability(MobileCapabilityType.AUTOMATION_NAME, "XCUIest"); dc.setCapability(MobileCapabilityType.DEVICE_NAME, "iPhone 7"); dc.setCapability("app", " "); IOSDriver driver = new IOSDriver(new URL(" "), dc); driver.manage().timeouts().implicitlyWait(60, TimeUnit.SECONDS); try { eyes.open(driver, "IOS test application", "test"); eyes.checkWindow("Initial view"); driver.findElement(By.name("TextField1")).sendKeys("3"); driver.findElement(By.name("TextField2")).sendKeys("5"); driver.findElement(By.name("ComputeSumButton")).click(); eyes.checkWindow("After compute"); eyes.close(); } finally { eyes.abortIfNotClosed(); driver.quit(); } } 123456789101112131415161718192021222324252627282930313233343536373839404142434445464748495051525354555657# Analyze your test results Congratulations! You've successfully run your first visual UI test with Applifools Eyes! A detailed report is ready for your inspection at the Applifools Eyes test manager. Watch this 5 minute video to get acquainted with the test manager and to learn the basics of baseline maintenance. Login to Applifools and analyze the results. # Learn more Applifools Eyes is a powerful platform for automated visual UI testing that supports full page screenshots, page layout matching, cross-device and browser testing, test batching, baseline branching and merging, automated baseline maintenance, collaboration features, and much more. Applifools has over 40 SDKs supporting a broad range of testing environments. # Reference documentation To learn more, check out the Applifools Eyes documentation and tutorials for other testing environments. # Request a demo If you want to see a demo of all our other features, you do request a demo # Knowledge base and Support You can search our Knowledge base for more information.
